

HOUSEHOLD DISPLACEMENTS THIS YEAR and ESTIMATED DISPLACEMENTS NEXT YEAR

**Exhibit I-1: Actual Displacements This Reporting
Year**

**Exhibit I-2: Projected Displacements Next
Reporting Year**

Exhibits I-1 and I-2

Displacements This Year and Estimated Displacements Next Year

Exhibit I-1 shows the number of elderly and non-elderly households displaced during the reporting year because of redevelopment activity other than the destruction or removal of units reported in Exhibit H-1. An example of a displacement reported in Exhibit I-1 would be a household permanently displaced in order to substantially rehabilitate the housing unit. Exhibit I-2 reports similar information about agency estimates of the number of displacements that may occur over the next reporting period.

For the reporting year, Exhibit I-1 shows that agencies displaced 115 households and that most (108) were non-elderly households. According to income category, most displaced households were low income (49 were very low and 14 were low). Information on the number of units constructed toward meeting agencies' replacement needs, within four years, is contained in Exhibits E-1, F-3, and F-4.

Exhibit I-2 reflects estimates reported by 38 agencies about displacements expected to occur next year. For the next reporting year, agencies estimate displacing 784 households. Most households are expected to be non-elderly (728) and lower income (542).
